

## Machine Upgrades Available to Older Machines

Through years of experience and customer feedback, we have made many improvements to the DewPoint hay steamer. We offer some of these improvements as upgrades to older models. Please call your dealer if you are interested in any of these upgrades. Detailed installation instructions will be sent with each upgrade to ensure successful implementation.

### **11024 & 11026 – Bearing Update Kits**

This upgrade is available to all machines that do not have ball bearings already (2013-2015). In 2016, we started installing ball bearings on all machines instead of tapered roller bearings. Some of the benefits of ball bearings include: Less expensive, higher degree of tolerance for misalignment, and more reliability. If you have experienced repeated bearing failures, you may need to upgrade to these bearings.

MSRP 11024: \$1,772; 11026: \$1,884.00

### **11062 – Battery Tray and Cut Off Switch Kit**

This upgrade is available to all machines that do not already have a battery cut off switch installed. The little green screen on the generator controller remains lit, even when the machine is turned off. For this reason, we offer this upgrade which will allow you to disconnect the power going to and from the battery. With this upgrade your battery won't be dead after a period of idleness, and you won't have to disconnect the battery cable every time your machine sits idle. Apart from the cut-off switch, the battery tray is more sturdy and durable. MSRP: \$284.39

### **11025 – Amber LED Work Light**

After a customer told us that he put amber LED lights on his DewPoint 6110, we decided to try it out. The amber colored LED lights help with visibility at night, since the light doesn't reflect as badly off the dust and hay leaves. These lights are a simple plug-and-play upgrade. MSRP: \$101.08

### **11075 – 2016 Handrail Platform Update Kit**

This upgrade is available for all machines that do not have handrails already. These handrails make accessing the top of the boiler easier. It comes with the ladders and platform rails. The upgrade is easy to install, and we think it contributes to the look of the machine as well. MSRP: \$1,944.64

### **11098 – Remote Grease Line Update Kit**

Those of you who have ever had to grease the two middle bearings know that they are not easy to access. That is why we came up with this upgrade. With these grease lines, one can grease the two middle bearings from the wheel well. It makes the process a lot more convenient. It requires that you drill two holes. MSRP: \$192.47

### **11099 – BKT Flotation Radial Upgrade Package – Tires and Wheels**

The BKT Flotation Radials will minimize both the effects of compaction in the field and on hay regrowth. Many customers choose these as an option when they initially purchase their machine. MSRP: \$6,960

### **11027 – C-More Touch Panel 8" Full Assembly Update Kit**

This update is offered to all machines. 6110 C-more screens are no longer sold, which will make this upgrade mandatory. Some of the benefits of this C-More include: Spanish language option, built in implementation guide and maintenance alerts, diagnostic fault codes, new interface, higher resolution, lighter, smaller, faster, and updates easier. MSRP: \$2650.95

### **11351 – 4-Lighting Boost Adapter Harness**

Some tractor lighting systems do not supply enough amperage through their work light circuit to operate all additional implement lighting. Our new "4-Lighting Boost Adaptor" relays power from the 12VDC+ Accy High Amp Input Terminal #7 to the work light Output Terminal #2 on the adaptor to resolve nuisance shutdowns of the work light circuit when plugging implement lights into the tractor. Simply plug this harness into your tractor or you may prefer to plug this harness into the back of your steamer and then plug the baler lighting plug into the receptacle on the adaptor. MSRP: \$189.50

### **Larger Capacity Propane Tanks**

Part numbers 11293 and 11294. This upgrade allows you to carry more propane on board, making it so you can operate for longer periods of time before having to exchange propane tanks. These propane tanks hold 2.6 gallons of propane, compared to the 1.4-gallon aluminum tanks. 11293 MSRP: \$300.00; 11294 MSRP: \$125.00 ea.

### **11046 – Staheli West Camera Kit, 10” Quad Monitor w/4 Monitor System**

This upgrade comes with everything you need to set up a complete four-camera system at a very affordable price when compared to similar camera systems on the market. The camera system allows operators of the DewPoint to see their baler pickup, knotter flags, and bale chute. MSRP: \$1,250.00

### **11361 – 6110 Fuel Line Update Kit**

This upgrade converts the old, brass tube fuel system on 6110 burners to a simplified, rubber fuel line system. Old brass lines are prone to leaking and breaking. This upgrade seeks to eliminate leaking. MSRP: \$1,266.35
